

Features

System Integration

Unify SAP and SharePoint systems, content, and metadata

Content Sharing

Access unstructured SAP content in SharePoint and Microsoft 365

Content Tagging

Apply metadata tags to content within SAP from SharePoint

Records Management

Manage your corporate SAP records within SharePoint with advanced records management capabilities

Unlimited User Access

Support as many SAP users as your company needs

Microsoft 365 ADG Access

Allow usage of Microsoft 365 Advanced Data Governance with your SAP content

Advanced Search

Improve accessibility with metadata-driven, rich document search through SharePoint and Microsoft 365

Document Filing

Automatically file documents in appropriate document libraries with both SharePoint and SAP metadata

Gimmel simplifies records and information management with software that captures, manages, governs, and archives information so you can focus on your core mission. Gimmel software allows you to fully manage the lifecycle of content in SharePoint, Microsoft 365, box, SAP, and other platforms.

GIMMAL LINK ENTERPRISE™

Easily connect SAP and SharePoint content, data, and processes.

Gimmel Link Enterprise is an SAP certified suite of functionality that provides integration between SAP and content service repositories.

This integration includes document storage, linking, bidirectional metadata transfer, process and workflow automation, as well as ArchiveLink processing. Line of business solutions (such as Accounts Payable) and additional add-ons (such as SAP DMS integration and AuditLink bundle creation) can be leveraged in addition to the baseline functionality.

In addition, Gimmel Link Enterprise provides a robust SAP based migration tool that handles migration of content from legacy SAP content repositories, automatically relinking content.

FUNCTIONALITY	LINK
Data Archiving (ADK)	●
Business Document Storage	●
Bi-Direction Metadata Transfer	●
